

# SaaS platform monitoring and control, finance velocity & AI

## Core concept

A unified mission-critical SaaS platform for operational control, travel orchestration, and financial intelligence. Multi-user, multi-role, modular, API-first, AI-powered.

A control platform,  
not an agency,  
CRM, or ERP

## Layers

Control, Registry, Financial  
Velocity, Analytics & AI.

## Core value

Creates a single source  
of truth for end-to-end traceability.

## Target clients

- 1 Airlines (HOTAC, AOG, disruptions)
- 2 Corporations with complex travel & distributed teams
- 3 Industries where trips, SLA, money, and scale are critical.

# End-to-end control and financial acceleration with real-time monitoring and AI

## Market problems

Fragmented data across emails, Excel, contractors, other services and applications.

Reactive, post-factum control.

Disconnected financial flows; cash gets "stuck."

Lack of actionable, predictive analytics.

### Key architecture

Multi-user, multi-role  
secure, scalable, adaptable.

### Modules

Requests/Tickets / Booking  
Real-time Monitoring  
Dispatcher Panel  
Registry & Ledger  
Financial Module / Analytics & AI  
Integrations / External Account  
Mobile App

## Functional highlights

### Real-time indication

Color-coded dashboard for risks, SLA, anomalies.

### Process control

Built-in workflows, role-based actions, full audit.

### Registry layer

Central digital record for trips, requests, finances, partners.

### Financial velocity

Manages obligations, reconciliations, and accelerates cash flow (reduces DSO).

### External account

Secure portal for clients/partners, reducing routine workload.

### AI & analytics

Two-level analytics with native AI for prediction, deviation analysis, and recommendations.

## Business outcome

### Removes

Manual control, cash gaps, process chaos.

### Delivers

Centralization, real-time transparency, faster decisions, scalability.

## Finalizes the loop

# Use case: Transformation of HOTAC aviation operations with one platform

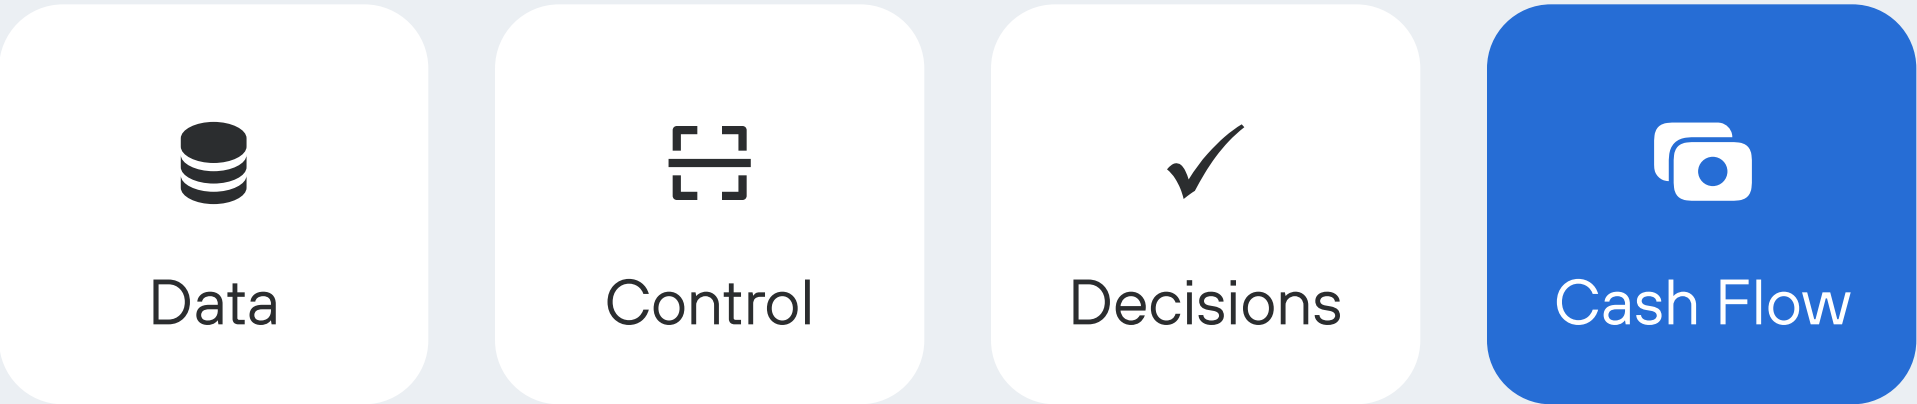

## Problem

Scattered data, reactive management, stalled cash flow

## Solution

A unified SaaS platform for real-time control, financial speed, and AI intelligence

### The bottom line

A "digital control center" for an airline, where Data, Control, Decisions, Cash Flow are finally synchronized.

## Key features

 Live control dashboard

See problems and risks before they escalate.

 Accelerated cash flow

Automate reconciliation and shorten payment cycles.

 Predictive AI analytics

Turn operational data into forecasts and recommendations based on statistics and analytics.

### Proven results for global airlines

40%

Faster incident response.

25%

Reduction in cash conversion time.

Full operational transparency and traceability.

Scalable control for any region or fleet size.
